Just like a car, your Houston home's heater needs regular heating maintenance to operate at optimum levels. Cool Techies, we offer seasonal heating packages that include finding and fixing small problems before they become large problems. We also thoroughly clean the unit, removing the debris that builds and causes friction that can wear the appliance out more quickly. We change the air filter and ensure that you can enjoy reliable heat and better indoor air quality when we are done. In addition, we will let you know if there are any potential problems that might require your attention sooner or later.

## Fast Heating Repair in Houston

Is your heating system struggling to keep up? Your HVAC system is one of the hardest working pieces of equipment in your home, so it's common for things to eventually wear out or get damaged. This can happen due to lack of maintenance, normal wear and tear or sudden damage to the equipment.

Whether you're facing a complete breakdown or a system that can't heat your home fully, you need a fast response. Your home can get cold quickly when your furnace stops working correctly. Many issues decrease the efficiency of the system, which means your utility bills will jump. Our team can handle any type of heating repair you need, no matter what type of system you have.

When they arrive for your furnace service, our technicians quickly get to work diagnosing the problem. They use the latest equipment to test your system and figure out what's keeping it from working correctly. We pride ourselves on finding inefficiencies and issues with existing systems.

Once we identify the problem, we'll offer you customized solutions to correct the issue. With fully stocked work vans, our technicians can complete most fixes immediately so you don't have to wait for your heat to be restored. We'll make sure everything's fixed correctly and working as it should before we leave. You can rest assured our professional technicians will take care of your home and clean up after themselves.

With Club Membership, you get VIP service and guaranteed 24/7 heating and AC service, so you can get an even faster response if your heater breaks down outside of normal business hours.

## How do you know when to call for a furnace repair?

Here are some common signs of an issue:

- Lukewarm air
- Inconsistent heating
- Reduced airflow
- Higher power bills
- Funny noises or smells
- No response from system or thermostat

## Superior Heating Maintenance in Houston

This type of heating system provides the distribution of heated air throughout the property.

The heat is transported by the air, which is then blown by fans through the duct system and released through vents located all over the property. If you are looking for an affordable design, then the forced air heating system is the right choice.

We carry exceptional products from such brands as [Carrier](#), [Trane](#), [Amana](#), [Goodman](#), [Lennox](#), and more.

## Our HVAC experts do lots of checks during furnace maintenance, including:

- Check all parts
- Clean internal components
- Tighten loose connections
- Adjust and calibrate components
- Test safety features
- Check air filters

We pride ourselves on our ability to identify poor installation and inefficiencies in your HVAC system. If we find ways to improve your system during your furnace tune-up, we'll present those solutions for you to consider as well. Improving your system and keeping it tuned up can save you money in the long term with lower utility bills and fewer repairs, so it's worth the investment in hiring a highly skilled team for the job. We can also provide heating repair, heating installation and AC maintenance services.

## Best Houston Furnace Maintenance

Cool Techies was started by a group of engineers in 2015 after tackling HVAC problems we had in our own homes. Now, we provide those same customized solutions to our customers, taking their needs and home features into consideration. We're an award-winning HVAC company with honors including the [Best of HomeAdvisor](#) Award and [Angi Super Service Award](#). Our team handles all types of HVAC issues, from furnace tune-up services to repairs with practical and innovative approaches to keep your home as comfortable as possible at an affordable price.

## **Electric Resistance Heating Systems**

This system design is composed of electric coils, and the heating system of this design converts electric energy into heat. The heat will rise through the air, and cool air is drawn to the bottom of the heater.

## **Ductless Heat Pump**

This system is perfect for homes. It can bring you energy-saving benefits, and it also fits in or around your property. This system takes heat from outdoors and converts it into warm air, and it takes your warm air from your home and expels it to the outside. Ductless Heat pumps will help lower your utility cost since it uses less power to function. Not only that, but it will improve your air quality and decrease your carbon footprint.

## **Furnaces**

Furnaces come in a variety of designs, reason why we would recommend you the best type of furnace for your property. We will consider what you wish to accomplish on your property, as well as how your air quality can be improved.

Do you have **any questions?**

**Cool Techies is proud to offer the best heating service in Houston. For all your home comfort needs, please contact us today! We can also help with your Air Conditioning needs in the warmer months.**

**We will offer you the design that fits your property best, is affordable, and brings your electricity bill down.**

What are some common heating repair problems?

Common problems that require heating repair include neglect, issues with the pilot light or ignition control, dirty or clogged filters, reduced circulation and airflow, an overworked heat pump, faulty

thermostats, leaks in your ductwork, or even mold.

Is it more expensive to turn my heat on and off?

Switching your heat on and off is actually not cost-effective at all. Your heating system works harder to reheat once it has turned off completely. Increased energy consumption for reheating your home will always cost you more.

When is the best time to replace my furnace?

While you can technically get your furnace replaced at any time, we recommend Fall and Spring. This is because your furnace isn't as needed yet during the ease of Fall, nor is it very useful during the warmth of Spring. It's best to handle these things before you need them the most. We can also help with your AC installation to get your HVAC systems installed in one visit.

How long does a heating installation take?

The average heating installation project takes anywhere from 4 to 10 hours in total. This will depend on the size of the unit and the model. The larger and more complex a heating system is, the longer it will take to install properly. While you might have quite some time to wait, your new furnace will be than worth it.

How too Choose the Right Heating System for Your Home?

Numerous HVAC businesses provide heater installation services. The specific services you require, however, will vary based on your needs for heating, your budget, your home's layout, your current system, and these factors. Because we are committed to offering the greatest service, our Houston heater installation specialists analyze all elements prior to installing a new heating system.

What Happens During Heating Maintenance?

Your HVAC technician will check components like system controls and your thermostat for performance, as well as tune-up the system's electrical connections. Your technician will also check that the voltage and amperage are running properly. Furnace/Air Handler cleaning is performed as necessary.

When is the best time to schedule heating maintenance?

The best time to schedule heating maintenance is during the time of year where you're not really using it. The time of year that is most appropriate would be the Fall. Alternatively, maintenance for an air conditioner is best placed in Spring.

Is forced-air heating always gas?

No. Forced air heating systems can operate on gas or electric power.

What is the lifespan of an electric heater?

Electric heaters last about 10 to 20 years with regular maintenance and care.
